

FERESPE

Railway Solutions

Technical rolling stock parts for high wear applications

- for better weldability and longer life medium and low alloyed steel with high strength, including applications at low temperatures and low residuals elements

- for specific applications
 - Austenitic
 - Martensitic
 - Duplex stainless steels

FERESPE range of high strength materials allows a weight reduction of the train.

Steel castings can be used in very cold areas of the globe due to FERESPE low temperature special alloys.
